**The Story of Revell...** In the early '50's Revell introduced the first plastic scale model car kits in the world. These kits were the forerunners of today's highly detailed plastic models available all over the world.

Currently Revell manufactures more than 300 different items and in its twenty-six year history has produced more than 200,000,000 units. These range in price from 60¢ to \$100 and include miniature reproductions of just about everything that rolls, flies or floats, plus items from the world of make-believe.

Just what does it take to manufacture a model kit? There has to be research and development, planning, engineering, manufacturing, marketing, advertising, sales promotion, packaging, plus many other activities that go unnoticed by the consumer.

The way it happens at Revell goes something like this ... you, the consumer, many times write in with suggestions as to what model kits you would like us to make. These suggestions are passed along to our Research and Development Department. They evaluate these suggestions and make recommendations to the Revell management team. If the management team approves the project, they forward the recommendation along to the Revell engineering staff. An engineer is then assigned to the project and will be responsible for designing this model in such a way so that

it will be economical to manufacture and practical to assemble.

From detailed engineering specifications, a hand-built original model must be created. From this original model, plaster and epoxy molds are made. These molds are then used as patterns for the steel tools and dies which are cut on pantograph machines. The steel dies are then hand-finished before being placed into a mold base and then installed in an injection molding machine. From start to finish, these many operations take approximately nine months. Once in the injection molding machine, kits are produced at the rate of approximately three per minute.

Some 500 people are employed in Revell's 10½-acre plant in Venice, California, turning out over 300 different kits, racing sets and electric trains which sell to 80 countries around the world.

In addition to the plant in the USA, Revell manufactures in five countries and owns subsidiary companies in Great Britain and Germany.
